This report contains forecasts of aviation activity of 866 airports in the United State for fiscal years 1991-2005. These include 399 airports with FAA air traffic control towers and radar approach control service and 25 FAA contract towers. For each airport detailed forecasts are made for the four major users of the air traffic system: air carriers, air taxi/commuters general aviation, and military. Summary tables contain national, FAA regional, and State aviation data and other airport specific highlights. The forecasts have been prepared to meet the budget and planning needs of the FAA and provide airport-specific information that can be used by State and local aviation authorities, the aviation industry, and the general public.	ins forecasts of aviation activity of 866 airports in the United Stat 1991-2005. made available to State and local aviation the including all airports in the National Plan of Integrated Airport Systems for which The data base is accessible on a real time basis by all FAA regional and headquarters In addition, the data can be developed annually for use in the agency's 866 airports. It is a subset of the terminal area forecast data base which aircraft operations data are available. presents historical and forecast data for contains over 4,000 public use airports, authorities for use on personal computers. The Federal Aviation Administration (FAA) This report, FAA Terminal Area Forecasts FY 1991-2005, It is a subset of activity planning and decisionmaking. aviation personnel.

level of resources needed to meet the anticipated demand for its services. In addition, we believe that these forecasts could be a helpful planning tool to State and local aviation authorities and to the industry in planning airport development and in accommodating future aviation needs.

This document will be available to the public through the Government Printing Office. We welcome public comments about the forecasts, as well as any suggestions for improving the usefulness of this publication.

The FAA uses these forecasts in developing its program plans and in assessing the

ohn M. Rodgers lirector of Aviation Policy and Plans This report was prepared by the Forecast Branch of the FAA Office of Aviation Policy and Plans. Thomas Henry was the principal analyst responsible for the development of the forecasts. Gene Mercer, Branch Manager, Robert Bowles, Virginia Price, and Nellie Jones also contributed their valuable support.

The computer programs are executed under the direction of Carlton Wine, Manager, Information Systems Branch. Mr. Wine and his staff organize and manage the data bases used to produce the forecasts, update the computer programs, and carry out the computer operations necessary to produce the individual airport forecasts.

In particular, Robert Stanley prepared special computer programs and generated the summary tables.

Special acknowledgments are made to the Regional Planning Officers and Airport District Officers for their assistance in coordinating the regional reviews, state input, and final forecast recommendations. The extensive reviews and comments of the regional offices were extremely important in guiding the Forecast Branch in making adjustments to the preliminary version of the report. Undoubtedly, the effort has enhanced the accuracy and credibility of the final product.

APPENDIX A

FAA TOWERED AIRPORTS

APPENDIX B

DESCRIPTION OF ACTIVITY MEASURES

PART 1: INTRODUCTION AND NATIONAL SUMMARY

SUMMARY HIGHLIGHTS

Forecasts are presented for 866 airports. Of these, 399 are FAA towered airports and radar approach control facilities and 25 are FAA contract towers.

0

About 309 towered airports, each with 1,500 or more enplanements, accounted for 450 million air carrier enplanements and 12.5 million air carrier operations in fiscal year 1989. Over 99 percent of air carrier activity occurred at these airports.

0

- o The Southern, Western-Pacific, and Eastern Regions are forecast to reach 506 million air carrier enplanements and 11.7 million air carrier operations, collectively, by the year 2005.
- o These regions will maintain their ranks as the top three regions for air carrier passenger enplanements.

0

o By the year 2005, the Western Pacific and Southern Regions will increase

- their proportions of enplanements slightly to 22.6 and 21.1 percent and the Eastern Region will be down slightly relative to the 1989 proportion of 16.7 percent.
- o Currently, 95.4 percent of all air carrier passengers are enplaned at the top 100 air carrier airports.
- o The top 100 air carrier airports account for 91.9 percent of air carrier operations.
- In FY 1989 the top five air carrier airports--Chicago O'Hare, Dallas/Ft. Worth, Los Angeles, Atlanta, and San Francisco--enplaned 23.9 percent of all air carrier passengers and accounted for 18.4 percent of all air carrier operations.

0

Air carrier enplanements are forecast to reach over 860 million by 2005, a near doubling from the 452 million in 1989.

This document presents forecasts of key aviation activity measures for 866 airports through fiscal year 2005. These forecasts are prepared to meet the planning needs of the Federal Aviation Administration (FAA) offices and services concerned with future traffic levels at these facilities. Except for specific regional or State requests, the airports selected for inclusion in the report meet at least one of the following criteria:

- o Existing FAA tower;
- o FAA contract tower;
- c Candidate for an FAA tower;
- c Currently receiving or expected
 to receive scheduled air carrier
 or commuter service;
- o Currently exceeds 60,000 itinerant or 100,000 total aircraft operations; or
- o Reported 10 or more based aircraft on the latest available Airport Master Record (FAA Form 5010-1).

The Terminal Area Forecasts (TAF) report

is organized in two sections. The first part is a general summary. It includes summary highlights, the introduction, a brief overview of the forecasting process, and a series of summary tables. The summary tables provide a national overview as well as a comparison among regions.

alphabetically by FAA region and, within each region, by State. The airports in each State are listed alphabetically by of projections, and projections for 2000 and 2005. In some cases, a comment about The second part contains the forecasts for arranged seven years of historical data, five years airport is included. The summary indicates the airport's tower/nontower status and the number of aircraft based at the airport in The airport data include summary information for the facility followed by current or planned aviation activity at the is airport. 1989 or 1990. each

State and regional summary statistics precede the individual airport forecasts. There are five tables that provide regional summaries and State comparisons from fiscal year 1985 through 2003 for air carrier enplaned passengers, air carrier aircraft operations, itinerant operations, total operations, and instrument operations.

forecasts presented in this report is Growth factors were applied (FY 1989) data at individual airports to project annual activity levels through FY 2005. Measures obtained from <u>FAA</u> FAA-APO-90-1 (March 1990), were used as Aviation Forecasts: Fiscal Years 1990-2001, control factors and to determine growth projections were modified using forecasts from major hub reports (discussed below) as provided by the nine FAA regions. The data the facility Preliminary information for individual airports were eventually added to generate various summary tables for FAA towers, individual States, FAA regions and, finally, national totals. as facility-specific to rates for some airports. individual airports to approach of aviation activity the base year general "bottom-up."

As a general rule, no expansion of airport facilities has been assumed for these forecasts except those recommended by the regions and, in part, noted in the comments and those implicit in specific hub forecasts or in specific airport master plans or aviation system plans. For some airports, the preliminary forecasts were adjusted to account for known operating constraints. When the level of operations at an airport begins to approach the

airport's design capacity, delays and congestion occur.

Forecasts at 30 of the major hubs have been The results have been incorporated in the These hub forecasts used regression models and trend analyses in generating an of aviation activity. The analysts also accomplished economic conditions of the metropolitan In each study, the hub's (or originating or connecting passengers, type developed and published in special reports. of aircraft and fleet composition, markets served, and frequency of service is analyzed also. operations forecasts reflect assumptions about the increased use of avionics by general aviation business aircraft and the expanded use of airport radar service areas The FAA regional offices provided updates of based general aviation aircraft In addition, other information was received which included the status of plans for new runways and the instrument possibility of new air carrier or commuter service. The assumptions and comments were and FY 1989 and 1990 activity airport nontowered airports. individual

incorporated in these series of forecasts subject to constraints consistent with activity levels in the national forecasts.

Activity Measures Forecast

The activities forecast for each airport include: commercial air carrier, air commuter/regionals, and air taxi enplanements; air carrier, air taxi (including nonscheduled air taxi, and scheduled commuter/regional air carriers), general aviation itinerant, and general aviation local operations; and instrument operations. A short description of each activity measure is included in Appendix B.

The TAF data base contains over 4,000 public-use airports including all airports in the National Plan of Integrated Airport Systems (subject to the availability of aircraft operations data). Activity levels and forecasts are available for the majority of these airports upon request.

Data Sources

Emplanements are based on data submitted to the Research and Special Programs Administration (RSPA) by the U.S. scheduled and nonscheduled commercial air carriers on Form 41 reports and by the U.S. air commuter/regional carriers on Form 298-C reports. These data are supplemented by an FAA survey of air taxi operators, by reports of foreign flag traffic from the U.S. Immigration and Naturalization

Service, and by State aviation commission's and airport manager's reports. Other sources, such as the Official Airline Guide (OAG) and Airport Operators Council International's (AOCI) traffic reports, provide data and background information when forecasting the type of operations and the level of activity at specific airports. These sources may be used to compile enplanement figures for both towered and nontowered airports.

Historical operations at FAA towered airports are derived from FAA air traffic activity reports. U.S. air carrier departures at nontowered airports were obtained from RSPA Form 41 reports. Other operations data at nontowered airports are based on special traffic surveys and on estimates provided in the FAA Airport Master Record, FAA Form 5010-1.

Instrument operations handled by FAA towered airports and instrument approaches for all airports are reported in the FAA air traffic activity reports. Region, State, city, airport name, and location identifier (LOCID), as well as an estimate of based aircraft, are taken from the FAA Airport Master Record.

The data obtained from these sources and

forecasts. Also, preliminary tower operations data for 1990 have been Airport District Offices and State aviation departments are requested to review the the preliminary forecasts are reviewed by substituted for the 1990 forecast values reconciled prior to production of the final FAA staff at headquarters and at In some regions, Erroneous are corrected during the review process. data also. data regional level. inconsistent preliminary

A Note on National Totals

The sums of the regional activity data in Aviation Forecasts publication referenced Tables 3 through 7 may not add exactly to the national totals contained in the FAA earlier. This is due to the different forecasts. The national forecasts utilize In contrast, the terminal area forecasts use activity levels at individual airports and airport master plan studies. When national totals are required, they should be obtained from FAA Aviation aggregate numbers throughout (for example, total aircraft operations at FAA towers). with inputs from regional, State, and local methodologies employed in producing specific hub the latest issue of the planners and Forecasts.

NATIONAL SUMMARY AND COMPARISONS BY REGION

The published TAF includes historical and forecast data for 866 airports through fiscal year 2005. Of this total, 399 airports had FAA air traffic control towers in FY 1989. In addition, there are 25 airports with FAA contract towers. Table 1 shows the distribution of the FAA air traffic control facilities throughout the United States. The largest number of FAA towers are located in the Southern Region (73 towers). California leads all states with 49 towers. Florida has 27 towers and Texas has 26 towers. An alphabetical list of cities with FAA towered airports is presented in Appendix A.

In total, there were 12.7 million air carrier operations and 452 million air airports accounted for about 450 million air carrier enplanements and 12.5 million Of the 399 towered airports, 224 had air carrier passengers and about 229,000 air carrier 281 airports (32 percent) registered 1,500 or more air carrier enplanements for FY Other Of the 866 airports included in the TAF, nontowered airports carrier enplanements in FY 1989. enplanements of 1,500 or more. air carrier operations in 1989. air 3 million and approximately operations. Table 2 shows a list of the top 100 air carrier airports in order of total passengers enplaned during FY 1989. Approximately 95.4 percent of all air

carrier passengers are emplaned at the top 100 airports. The top five airports (Chicago, Dallas-Ft. Worth, Los Angeles, Atlanta, and San Francisco) accounted for 23.9 percent of all air carrier emplanements. Nearly 50 percent of all air carrier emplanements in the United States occurred at the top 16 busiest air carrier airports.

regional comparisons from 1985 through 2003 for all air carrier enplaned passengers and aircraft operations, total aircraft operations, and percent distributions of these various activities among the regions are shown in Tables 8 through 11. The forecasts in this other enhancement of the existing facility in specific airport air carrier aircraft operations for all with FAA-operated air traffic control towers and at specific airports except where mentioned as a footnote to the individual forecasts Tables 5 do not assume construction additional runways, runway extensions, master plan or other report or studies. summaries operations at airports radar approach control facilities. itinerant airports published in the TAF. Tables 3 and 4 provide show where implicit 7 instrument

Tables 12, 13, and 14 indicate total, itinerant, and local general aviation aircraft operations for approximately 4,000 airports included in the TAF data base. It is estimated that the TAF data base

represents approximately 80 percent of the total general aviation operations.

A summary of growth factors for general aviation itinerant and local operations by region and State for nontowered airports is provided in Table 15. These growth rates may be used as a guide for making or reviewing aviation activity projections at airports that are not included in the published TAF. The number of based aircraft at an airport is sometimes used as an index of actual or potential aviation

activity at specific airports or regions. Table 16 presents a summary of based aircraft by states and FAA regions for FY 1989. The total of 212,288 based aircraft reported in 1989 represents approximately 96.6 percent of the active general aviation fleet in 1989. A significant number of airports in the TAF reported based aircraft for the first time in 1989 thereby accounting for the high percentage relative to the active general aviation fleet. Also, the based aircraft count may include some "inactive" and military aircraft.

APPENDIX B

DESCRIPTION OF ACTIVITY MEASURES

airports to go through customs and then in an airport's Commercial air carriers are certificated in specified submitted to Research and Special Programs International passengers who disembark at enplanements. accordance with FAR Parts 121 or 127 to may also carriers Administration (RSPA) on Form 41 reports. Enplanements - . include transfer provide nonscheduled or charter services, scheduled conduct scheduled services on These air carriers air and passenger commercial reenplane are included stopover, of U.S. Carrier originating. nonscheduled o£ passengers routes.

Air Taxi Enplanements.-include survey estimates of nonscheduled air taxi enplanements. Where data are unavailable, enplanement counts are estimated from the number of operations multiplied by an estimated "load-factor" (number of passengers per departure). The air taxi load-factor typically ranges from one to three people.

Commuter/Regional/Air Taxi Operations -- aircraft arrivals and departures performed by commuter/regional carriers or air taxi operators certificated in accordance with FAR Part 135 or Part 121 who fly aircraft with 60 seats or less. Commuter/Regional Enplanements--include

Part 135, operate aircraft with a maximum of 60 seats, provide at least five round enplanements on scheduled commercial air Typically, trips per week between two or more points, carriers reported with carriers accordance 298-C. air commuter/regional in commuter/regional on Form or carry mail. certificated

General Aviation Operations -- all civil aviation aircraft operations except those performed by air carrier, air taxi or commuter/regional aircraft.

point from which a landing may be made The published TAF does not include forecast of annual instrument forecast data are stored in the data base regional offices or from the Office of transfar of an aircraft under instrument the initial approach to a landing, or to a for the orderly or weather related) conditions from the beginning of on the computer and are available from Historical series flight rules (meteorological Approaches -- a Aviation Policy and Plans. predetermined maneuvers approaches (AIA's). Instrument visually.

Instrument Operations -- occur when an FAA operated terminal control facility handles the arrival, departure, or overflight of an aircraft on an Instrument Flight Rules

(IFR) flight plan or provides separation to facilities include instrument operations Primary facilities are FAA towered airports Secondary facilities are airports (towered credited to both the primary facility and area radar service are included under instrument operations. The instrument data for some control service from a primary approach control facility. Instrument operations which occur at secondary airports are the airport where the physical landing or takeoff occurs. Non-IFR instrument counts facilities and airports with Stage III of count include FAA operated for both primary and secondary airports. and nontowered) which receive approach military radar approach control facilities service. (Air Force RAPCON's and Navy RATCF's). terminal control with radar approach control The instrument operations. aircraft. at existing operations

<u>Itinerant Operations</u>--all aircraft operations other than local aircraft operations.

*U.S. GOVERNMENT PRINTING OFFICE: 1991--525-786/40723

local Operations. those performed by aircraft that: (1) operate in the local traffic pattern or within sight of the airport; (2) are known to be departing for. or arriving from, flights in local practice areas located within a 20-mile radius of the airport; or (3) execute simulated instrument approaches or low passes at the airport.

Stage III/Radar Sequencing and Separation Service for VFR Aircraft--provision of traffic information, full-time vectoring and sequencing to arriving Visual Flight Rules (VFR) aircraft and separation between all participating aircraft.

Total Operations -- the sum of itinerant and local operations. Every takeoff and every landing is counted as an aircraft operation.
